

# AUTOMATION TIPS

A series of insights to help you improve your packaging lines and reduce challenges surrounding labor shortages and increased production demands.

## INCREASE THROUGHPUT

Your production is often limited by manual repetition of applications such as lane combining and dividing, orienting products, or grouping and stacking for multi-packing. Morrison offers products that automate these processes. Our machines are designed to utilize timing screw [feed screw] technology to perform these applications that can speed up the process and ultimately increase the number of containers you can output on your line.

- Use timing screw systems to automate stacking and grouping of containers ahead of your cartoners or sleeves
- Increase throughput with automation of lane combining and dividing
- Orient containers with our different automated orientation solutions that use mechanical and vision based technology rather than manual labor
