

Meet the Newest  
Product in Our Line of  
Inverting Solutions.

## ABOUT THE PRODUCT:

The Morrison Twist Block is a low-cost inverting solution to flip containers from one side to the other on your packaging line. This backlog fed system is a great solution for rigid containers. We still offer our power twists for random fed systems or challenging containers, which completes our robust line of inverting products.

**Install new or retrofit to your existing line today!**

### Reduce Footprint

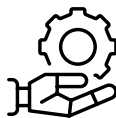

Our standard models range between 12-18 inches. Compared to other blocks on the market, this is a significantly reduced footprint giving you more control of your space. Custom sizing is available.

### Customizable

Install to your new or existing line! This low-cost solution can be customized to your unique container for an affordable way to maximize production.

### Easy to Clean

Our block is designed to minimize pieces of plastic to make disassembly quicker for cleaning. Rather than sandwiching dozens of plastic pieces together, we cut our blocks in only a few, making cleaning a breeze.

### Simple Mounting

This twist block is light weight and easy to maneuver with the built in handle. Mount via standard brackets, or our quick change clamp design when consistent change over and cleaning is required.
